

Project / Starward Distillery

Jul/Aug 2017

Location / 50 Bertie Street, Port Melbourne

Client / Empire Concrete & Formwork

The Smart Hob system is not usually an exposed product. Yet for this distillery project, it was the ideal solution to create a raised water barrier system, separating the processing areas from the public spaces.

Replacing the traditional method of forming up a concrete step, the permanent metal hob resulted in a neat and clean finish, adding to the industrial style.

In the client's words, "**Installation is fast and simple. With a little extra attention to detail, it's easy to create a product that not only serves its purpose, but also looks great.**" Scott R. - Empire Concrete & Formwork.

Advantages of using the system:

- It is easy and fast to set up
- Eliminates the need to strip temporary form ply, saving on site labour and construction time
- Limits the damage caused to existing concrete slabs when fixings are removed from the traditional formwork process
- A consistent and precise hob every time
- Straight, true and accurate framing
- Customised sizing to suit the project specifications

Smart Hobs...easier, smarter and faster.
